Key Word Index

2 cm^3 coupler, 282
1000 Hz tympanometry, 739

absolute threshold, 97
acceptable noise level, 417
acoustic change complex, 126
acoustic stapedius reflex, 391
admittance, 739
adults, 107
age, 883
aging, 54, 391, 539, 559
American Academy of Audiology Task Force on the Health-Related Quality of Life Benefits of Amplification in Adults, 151
amplification, 17, 54, 220
AMTAS™, 78
APHAB, 496
assessment, 428
attention, 539, 548, 573
audibility, 54, 539
audiogram, 97
audiometry, 78
auditory, 573
auditory brainstem response, 863
auditory deprivation, 515
auditory event-related potentials, 34
auditory neuropathy, 380
auditory perception, 522, 813
auditory processing, 826
auditory processing disorder, 34
auditory scene analysis, 573
auditory steady state response, 826
auditory streaming, 559
auditory tests, 34
Auger electron spectroscopy, 846
automated audiometry, 78

background noise, 417
benefit, 323, 482
bilateral, 760
bilateral amplification, 515
bilateral vestibular dysfunction, 236
bimodal, 760
binaural, 515
binaural interference, 515
Blue Mountains Hearing Study, 391
bottom-up, 539
brainstem, 826
"breaking news," 675

central auditory nervous system, 826
central auditory processing, 141
central auditory processing disorder, 428
children, 34, 220
cigarette smoking, 665
clinical practices, 428
cochlear delay time, 725
cochlear function, 665
cochlear implant, 126, 700, 760, 777, 872
cognition, 539, 548, 559, 590
cognitive function, 604
communication performance, 304
compensation, 539
compression, 206, 641, 688
compression ratios, 17
compression release settings, 618
computerized dynamic posturography, 461
conductance, 739
connected speech test, 641
corrosion, 846
cortex, 826
cortical auditory evoked potential, 117, 126, 380
counseling, 66, 675
cross validation, 78

dead regions, 97
diabetes, 863
diagnostics, 428
dichotic, 34
digital hearing aid, 653
directed attention, 34
directional benefit, 5
directional microphones, 245, 358, 794
distortion product otoacostic emission amplitudes, 665
distortion product otoacoustic emissions, 749
divided attention, 34
Duracell, 846
dynamic visual acuity, 236

ease of listening, 245
elderly adults, 97
electrophysiology, 826
energetic masking, 5
Energizer, 846
energy dispersive x-ray spectroscopy, 846
ERP, 573
event-related potentials, 107
everyday listening environments, 358
evoked potential, 590
expansion, 641
explicit cognitive storage and processing capacity, 618

fast-acting compression, 604
feedback reduction system, 404
field evaluation, 17, 220
fitting protocol, 482
frequency boundaries, 700
frequency-specific hearing screening, 725
functional evaluation, 220

gap detection, 141
gender, 883
Glasgow Benefit Inventory, 496

Hagerman sentences, 618
health-related quality of life, 151
hearing aid, 5, 17, 66, 117, 151, 206, 245, 274, 292, 323, 358, 380, 404, 482, 504, 688, 760, 872
hearing aid battery, 846
hearing aid benefit, 274, 304
hearing aid outcome, 66
hearing aid satisfaction, 274
hearing aid use, 274
hearing disorders, 257

hearing loss, 5, 151, 522, 573, 813
HINT, 618, 641, 688

immittance, 391
implant artifact, 126
infants, 117, 220
informational masking, 5, 559
input/output detection thresholds, 665
insertion gain, 282
instantaneous input dynamic range, 777
intensity, 141
intervention, 428
intracranial hypertension, 197

latency, 863
lesion, 826
letter monitoring, 618
level of processing, 539
lipreading, 883
localization disabilities, 794
localization handicaps, 794
loudness discomfort, 282, 504
loudness growth, 206
loudness perception, 504
loudness satisfaction, 206

management, 428
maps, 700
maximum output, 504
memory, 539
meta-analysis, 151
microphone preference, 358
middle ear, 739
modulated noise, 604, 618
modulation, 54
multitalker babble, 292, 522
music, 417
music preference, 417

neonates, 739
neuropathy, 863
newborn hearing screening, 725
noise, 54
noise reduction, 641
non-acoustic benefits, 151
normal hearing, 749

objective tinnitus, 197
omni-directional microphones, 794,
oscillopsia, 236
Otologics MET, 496
outcome measures, 323

P300, 107
paired comparison, 404
peak clipping, 688
pediatric vestibular evaluation, 461
perception, 573
phase-compensated stimuli, 725
postlingual hearing loss, 872
Power One, 846
professional education, 428
profound hearing loss, 17
psychosocial adjustment, 304
pulsatile tinnitus, 197
pure tone average, 653
pure-tone audiogram, 604

Qualind™, 78
quality, 688
quality assessment, 78
quality of life, 257
questionnaire, 66, 117, 700

Ray-O-Vac, 846
reading span, 618
real ear insertion gain, 653
real ear measurements, 282
real ear unaided gain, 653
retest reliability, 813
retest stability, 813
risk factors, 749
rotary chair, 461
rust, 846

salt spray fog apparatus, 846
satisfaction, 323, 482
scanning electron microscopy, 846
screening, 428
self-assessment scales, 496
self-perceived disability and handicap, 794
severe hearing loss, 17
slope of audiogram, 653
slow-acting compression, 604
sound quality, 404
spatial hearing, 559
speech, 126, 590
speech audiometry, 515
speech intelligibility, 5
speech perception, 515, 522, 777, 813, 872
speech perception tests, 700
speech processing, 548
speech processor map, 777
speech recognition, 54, 245, 292, 688, 872
speech recognition ability, 515
speech recognition in noise, 604, 618
speech-spectrum noise, 522
standardized patient, 675
stimulus effects, 107
streaming, 590
student evaluation, 675
subjective measures, 323
susceptance, 739
syringohydromyelia, 197
systematic review, 151

temporal resolution, 141
TEN test, 97
tinnitus, 257
top-down, 539
treatment, 428
tympanometry, 391

unilateral amplification, 515
unilateral vestibular dysfunction, 236
unmodulated noise, 604, 618

vestibular evoked myogenic potentials, 461
vestibulo-ocular reflex, 236
Vibrant Soundbridge, 496
visual letter monitoring score, 604

WDRC, 641
wide dynamic range compression, 17, 641
word identification in noise, 559
word recognition in multitalker babble, 522, 813
working memory, 604, 618

young men, 749

zinc air, 846
